Exercise : Importance of Salt

Passage:

Salt is also an essential element. Without salt, life itself would be impossible since the human body requires the mineral in order to function properly. The concentration of sodium ions in the blood is directly related to the regulation of safe body fluid levels. And while we are all familiar with its many uses in cooking, we may not be aware that this element is used in some 14,000 commercial applications. From manufacturing pulp and paper to setting dyes in textiles and fabric, from producing soaps and detergents to making our roads safe in winter, salt plays an essential part in our daily lives. Salt has a long and influential role in world history. From the dawn of civilization, it has been a key factor in economic, religious, social and political development in every corner of the world; it has been the subject of superstition, folklore, and warfare, and has even been used as currency.

Questions?

1. It is plausible to live without consuming salt.
2. Sodium ions manage and command body fluid levels.
3. Salt deficiency results in disease.
