

■ SPEAKING

◆ Read Aloud

Q#	Answer
1	Many people are under the impression that the water that comes out of a plant is clean. This is a common misconception: the function of a plant is to make the water cleaner, but it needs to be cleaner to drink. It could be used in irrigation. A plant is trying to speed up a process that would naturally occur given more time.
2	We understand that not everyone can put their job and other responsibilities on hold while studying. That's why our healthcare ethics and law master's courses are available to study by distance learning, so you can fit gaining an academic qualification around your work and family.
3	Electronic discourse is one form of interactive electronic communication. In this study, we reserve the term for the two-directional texts in which one person using a keyboard writes language that appears on the sender's monitor and is transmitted to the monitor of a recipient, who responds by the keyboard.
4	There are many ponds, but nearly all are small bodies of shallow, stagnant water where plants with roots can grow. Water movement is slight, and temperatures fluctuate widely. The wealth of plants ensures that oxygen is plentiful during daylight hours. However, when photosynthesis no longer occurs at night, oxygen supplies can fall very low.
5	As the nights draw in and the days turn a little gloomy, the winter months can often impact our mental and physical health. With that in mind, a trip to sunnier climates might be exactly what you need to boost your well-being.
6	The provision of accurate and authoritative statistical information strengthens modern societies. It provides a basis for decisions on where to open schools and hospitals, how much money to spend on welfare payments, and even which football players to replace at half-time.

◆ Repeat Sentence

Q#	Answer
1	Charles used to take the bus, but now his friend drives him.
2	The accounting office checked each worker's salary every month.
3	The application form must be submitted before the end of term.
4	He could not feel motivated when studying mathematics.
5	The history of our society is complex and fascinating.

- 6 Let's all meet at four, not three as we agreed before.
- 7 Companies are offering us all kinds of internet connected devices.
- 8 Common symptoms of diabetes are weight loss and fatigue.
- 9 We want to improve the quality of life and the standard of living.
- 10 It sounds as if they might have made a dreadful mistake.

◆ Describe Image

- | Q# | Answer |
|----|--|
| 1 | The bar chart compares tech innovation rates across six regions. North America leads at just under 7%, followed by Europe at around 6.3%. Australia is also relatively strong near 5.6%, while Asia sits close to 5%. The lowest innovation levels are seen in South America at roughly 3.2% and Africa at about 2.6%. Overall, innovation is highest in North America and Europe and weakest in Africa and South America. |
| 2 | The bar graph compares male and female literacy rates across various regions in 2010. Central Asia and Eastern Europe recorded nearly full literacy for both genders, while the gap widened in Arab states and South-West Asia. Sub-Saharan Africa showed the lowest rates, especially for females. Overall, the data suggests that developed regions maintained high literacy equality, whereas developing areas faced noticeable gender disparities in education access and literacy achievement. |
| 3 | The bar chart compares nutritional content of five health foods across protein, fiber, and calcium. Quinoa shows the highest calcium at roughly 265, and also has high protein near 20. Blueberries have strong calcium at around 215 but lower protein close to 10. Kale and avocado appear richer in fiber, each near 15-16, while almonds show moderate values across all nutrients. Overall, quinoa leads in calcium and protein, whereas kale and avocado stand out more for fiber. |
| 4 | The pie chart shows the proportion of different book categories sold in a bookstore. Horror leads significantly, making up 30% of total sales, followed by romance at 25% and drama at 15%. Religion accounts for 10%, while travel and other food-related books contribute 7% and 3% respectively. Biography represents 5%, health 3%, and poetry just 2%. Overall, fiction-based genres dominate sales, particularly horror and romance, indicating strong customer preference for entertainment-oriented reading. |
| 5 | The bar chart compares illiteracy rates for males and females across six world regions in 2000. The highest rates occurred in South Asia and Arab States, exceeding 50% for females. Sub-Saharan Africa also showed high rates, while developed countries had the lowest, below 5%. Across all regions, female illiteracy was consistently higher than male illiteracy, reflecting a global educational imbalance. |

◆ Re-tell Lecture

- | Q# | Answer |
|----|---|
| 1 | The lecture explored what would happen if the internet suddenly disappeared. People would revert to phone calls, handwritten letters, and physical file transfers. Online banking would collapse, rendering cards useless. While half the world might not notice immediately, the rest would face communication breakdowns and economic chaos. In conclusion, the internet is deeply integrated into modern life, and losing it would cause major disruption. |
| 2 | The speaker described British Columbia as Canada's third-largest province, noted for its mountainous terrain and extensive forests. Warm Pacific winds cause heavy rainfall on western slopes, creating ideal conditions for giant trees like Douglas fir. The region's geography results from glacial activity during the Ice Age. These forests are economically important, producing more lumber than any other North American source. The province has a mild, marine climate with year-round moisture. |

◆ Answer Short Question

- | Q# | Answer |
|----|---------|
| 1 | Therapy |

- 2 July
- 3 Egypt
- 4 Aquarium | water
- 5 Rehearsal|rehearse

◆ Summarize Group Discussion

Q#	Answer
1	The discussion focuses on how students can improve their academic writing skills, particularly in areas like structure, clarity, and tone. The first speaker expressed frustration over consistently losing marks despite understanding the material. They found it difficult to organize their thoughts and noted that their writing often lacked structure and came across as too casual, even when they tried to sound formal. The second speaker recommended creating a detailed outline before writing, including the introduction, arguments, evidence, and conclusion. They also emphasized treating the first draft as a rough version and making time for multiple revisions. Additionally, they advised reading the essay aloud to identify informal language and suggested using tools like Grammarly with caution, stressing that manual proofreading is still crucial. The third speaker highlighted the benefits of reading academic journal articles to better understand tone, transitions, and structure. They mentioned that doing so not only improved their formal writing style but also helped expand their academic vocabulary. They also encouraged using the university's writing center, which offers tutoring, workshops, and personalized feedback on drafts, all of which significantly enhanced their writing clarity. All three students agreed that academic writing improves gradually with feedback, practice, and the right strategies. They concluded that with consistent effort-through outlining, revision, academic reading, and campus support -students can become more confident and effective writers over time.
2	The three speakers discussed whether allowing students to choose their academic advisors would enhance support and guidance, examining both benefits and implementation challenges. Emily, the student, advocated for advisor selection flexibility, arguing that students have diverse goals, including study abroad plans and niche field interests that randomly assigned advisors might not address effectively. She shared her personal experience of being matched with a biology specialist while focusing on data science, resulting in limited guidance for electives and internships. Emily suggested allowing students to switch advisors once their interests are clarified and proposed creating advisor profiles with video introductions to help students connect based on expertise, personality, and communication style. Dr. Roy, the professor, acknowledged the importance of field-specific guidance while expressing concerns about unequal distribution leading to faculty overload. He proposed a two-stage model combining an initial structured assignment with subsequent flexibility for student-requested changes. Dr. Roy also suggested implementing caps on advisee numbers per faculty member to prevent overburdening and ensure meaningful advisor-student conversations. Ms. Jasmine, the administrative representative, recognized existing system limitations despite departmental alignment and year-based assignments. She revealed ongoing departmental considerations for advisor profile creation, including short bios highlighting expertise and advising styles to facilitate informed student decisions when requesting changes. All three speakers ultimately agreed that improving advisor-student matching through increased transparency, structured flexibility, and balanced workload distribution would significantly enhance the academic advising experience and student support effectiveness.

◆ Respond to a Situation

Q#	Answer
1	Hi, I'm interested in practicing a second language and heard that the university offers language exchange programs for students. Could you provide me with more details on how to join the program and what opportunities are currently available? I'd really like to improve my speaking skills and meet other students who are learning different languages. Any information about the process or upcoming events would be greatly appreciated. Thank you for your help!

- 2 Hello, I'm excited about the department's sustainability campaign and would like to propose an idea for a recycling app. However, I'm a bit unsure about the submission procedure and the specific details required for the proposal. Therefore, I wanted to reach out to seek clear guidance on how and where to submit it, and if there's a preferred format or deadline I should follow. Having this information will help me present my idea more effectively and ensure it meets the campaign's expectations.

■ WRITING

◆ Summarize Written Text

Q#	Answer
1	The Olympic torch relay, carrying the flame from Athens to the opening ceremony via former Olympians and the public, requires years of preparation and mandates that each identical torch meet technical standards for fuel, flame visibility, and weight, while its design reflects the host country's identity as in the Tokyo 2020 torch by Tokujin Yoshioka, shaped by Japan's cherry blossom and made with aluminum recycled from 2011 earthquake relief housing.
2	Wetlands, vital ecosystems hosting diverse species and supporting livelihoods, provide essential services like water purification, flood control, and carbon storage, yet their degradation persists due to limited community participation in management, underscoring the need for inclusive, informed decision-making to safeguard their environmental, social, and economic significance.

◆ Write Essay

Q#	Answer
1	In today's modern world, the extremely high income of famous athletes and entertainers has become a widely debated topic. While some people consider these earnings excessive and unfair, others believe they are justified because of talent, dedication, and economic contribution. In my opinion, earning millions of dollars can be beneficial, although it also presents certain concerns. One of the strongest arguments in favour of high salaries for athletes and entertainers is their significant contribution to the economy and society. These individuals invest years of hard work, discipline, and continuous training to achieve success in highly competitive industries. For instance, globally recognised sports players and actors generate enormous revenue through advertisements, ticket sales, and media rights. Moreover, many celebrities actively support charitable organisations and social causes, using their wealth and influence to create positive change. Therefore, their earnings can be seen as a reward for exceptional talent and contribution. On the other hand, critics argue that such enormous salaries create economic inequality and send the wrong message to society. Professions such as teachers, doctors, and scientists often make vital contributions to human welfare but receive significantly lower compensation. A clear example of this imbalance can be observed during public health crises, where healthcare professionals play a crucial role despite earning far less than entertainers. Consequently, excessive celebrity income may appear socially unfair. In conclusion, the high earnings of famous athletes and entertainers remain a complex issue. Although their talent, popularity, and economic impact justify substantial rewards, society should also recognise and value other essential professions more fairly. Overall, I believe that earning millions is acceptable, provided that wealth distribution and social appreciation remain balanced.

■ LISTENING

◆ Summarize Spoken Text

Q#	Answer
1	The speaker highlights cultural exchange as a powerful force for global understanding. It encourages empathy and reduces prejudice by exposing people to new traditions. While cultural sharing fosters diplomacy and creativity, it also fuels economic cooperation. For instance, international arts and tourism strengthen bonds. Therefore, embracing cultural exchange supports peaceful coexistence and enriches global communities.
